Tabouret Haut

Jean Prouvé, 1942

vitra.

For the design of Tabouret Haut, Jean Prouvé drew on a traditional type of bar stool that is still in common use today: a thin round seat resting on top of four long, canted legs. A ring is mounted to the inside of the legs at about a third of their height from the floor, increasing the rigidity of the construction and also serving as a comfortable footrest.

Prouvé's interpretation of this classic type is distinguished by its simple, unpretentious appearance, lucid structure and harmonious proportions.

- **Seat:** solid oak, natural or dark stain, clear protective lacquer finish.
- **Base:** solid oak legs, natural or dark stain, clear protective lacquer finish. Footrest: chrome-plated tubular steel, anti-skid surface.
