Confair folding table.

Dynamic. Space-saving. Superbly designed.

Thanks to Confair folding tables, versatile usage of well-designed conference and meeting areas is child's play. Only one single person is required to set up and rearrange the moveable folding tables – without any tools, releasing or unlocking procedures or special skills involved. Snap connectors allow the tables to be linked in any direction. If partitions are used to divide up rooms, conference or project work tables can be transformed into a large conference layout in no time. It is a welcoming thought that investing in Confair folding tables pays for itself so quickly…

The sophisticated folding technique and the large lockable wheels, as well as the elegant design and high-quality materials, are equally responsible for the table's success. The table's structure makes it simple to use and transport. The look of the table reflects communication at a high level: from the conference and project-work room, to executive offices. As options, cable channels, power supply connections and innovative techni-modules ensure interactive access to state-of-the-art multi-media equipment is so easy it has to be believed. The table is the perfect mix of well-used space, aesthetic appeal and advanced technical functions.

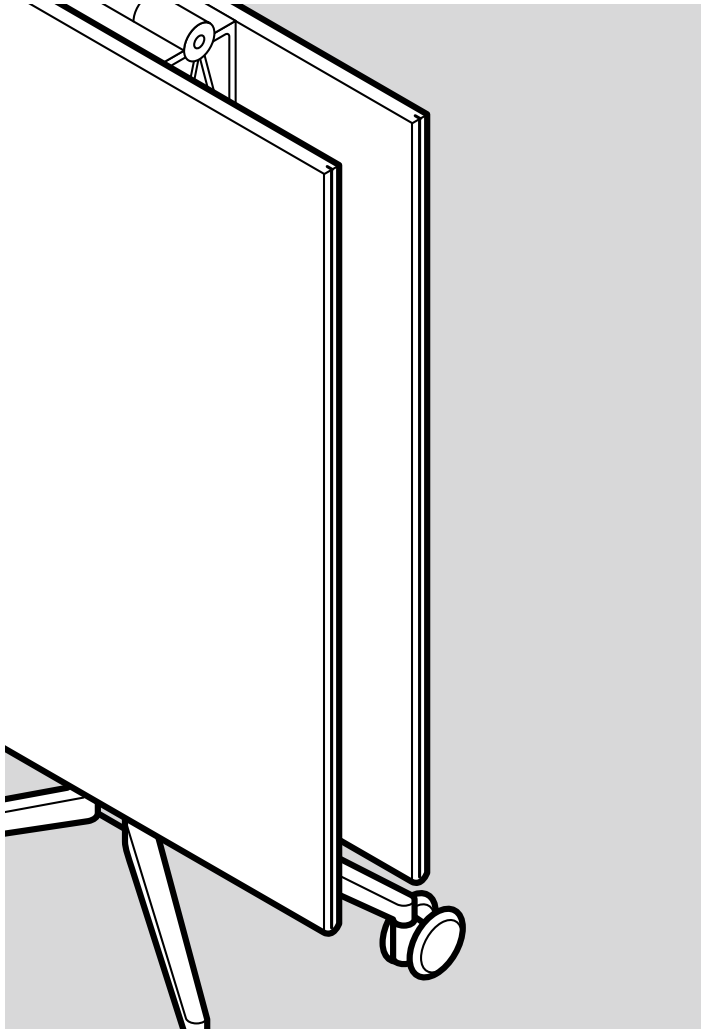

Design: Andreas Störiko

Confair folding table. 440 range. Technical details.

Function
Moveable, collapsible and linkable table range for flexible, dynamic use of conference and communication areas. Just one single step is required to open out or collapse up to three metre long, barrel-shaped or rectangular tables. The tables can also be linked to form conference systems using table-table connectors. Large-sized wheels allow the tables to be transported in buildings and come complete with a locking brake. As a result, minimum cost and effort is required to manage conference spaces. Ideal for multipurpose conference interiors in high quality design. Alternatively as a wild card in combination with the Logon table range for conference spaces with a variety of partition options, or with Timetable for sophisticated training and seminar spaces.

Frame
Die-cast aluminium, bright chrome-plated, polished foot section or coated in silver satin finish or black. Aluminium profile uprights and underframe, clear anodised or coated in the same colours as the foot sections. The bright chrome-plated foot sections are coated black. Upright optionally available bright chrome plated. Connecting bar und T-shaped joint coated like the uprights and underframes, with clear anodised uprights and underframes coated in silver satin finish. Connecting rod and T-shaped joint optionally bright chrome-plated. Lockable, black polyamide castors.

Core material of table top
Laminboard with bullnose double, concealed lipping with integrated impact-resilient profile in black elastomer. Straight version of table top without any profile along central joining edge.

Table top group 1 – laminate
Thickness 26 mm (1")
Laminate according to Wilkhahn colour and surface finish samples with laminated beech lipping, natural oiled finish.

Table top group 2 – veneer
Thickness 26 mm (1")
Variation 1:
Beech veneer according to Wilkhahn woodstain colour samples with laminated beech lipping or oak, or ash veneer according to Wilkhahn woodstain colour samples with lipping, as far as possible in the same colour as the veneer.
Variation 2:
Maple, elm or walnut veneer, as well as Wilkhahn veneer Mocca according to Wilkhahn woodstain colour samples with lipping, as far as possible in the same colour as the veneer.

Veneer types
As a standard, veneers are applied to the table top using the slip-matched method.
The surfaces are sealed with clear lacquer: Open-pore: oak, ash, walnut and elm veneer, as well as Wilkhahn Mocca veneer.
Closed-pore: maple and beech veneer.
Some specific growth features possible.

Table top group 3 – linoleum
Table top thickness 27 mm (1⅛").
Linoleum according to Wilkhahn linoleum colour samples, laminated beech lipping, natural oiled finish.

Standards
The Confair folding tables comply with ANSI / BIFMA X 5.5.

Table top groups

Laminate, veneer type 1 or 2, linoleum, you can find further surfaces in our media center.

Laminate. The material is made by bonding cellulose and décor paper layers, as well as resin, by applying heat and pressure. This produces an extremely tough surface that comes in a variety of different colours. Laminate is highly recommended for areas where the tables are subject to a lot of wear and tear because they are frequently moved around for example.

Wood veneers. Natural wood is a living material: in the way it looks and changes over the years. Sometimes more significantly and sometimes more subtly, depending on the type of wood and how light it is. If a more consistent look is preferred, stained surfaces or industrially produced veneer (e.g. mocha) are available.

Linoleum. The material consists of linseed oil and natural resin that is applied to a backing layer and protected with a matt-glossy lacquer. In terms of haptics, it is not just extremely pleasant, but is naturally anti-static too. Virtually no finger prints or dust stick to the surface. Over the years linoleum table tops gain a characteristic patina.

Foot section and upright

Bright chrome-plated or polished aluminium, coated in black or in a silver, satin finish
(uprights not polished, but available as clear anodised versions)

The digital sample colours differ from the originals.
You can find our current fabric collection in our media center.

Confair folding table. 440 range. Table edges.

Edge profiles

Standard type: bullnose with integrated impact-resilient profile
Alternatively: straight with integrated impact-resilient profile

Bullnose edge with a black impact-resilient profile, table top 26 mm thick

Bullnose edge with a white impact-resilient profile, table top 26 mm thick

Coated bullnose edge with a black impact-resilient profile, table top 26 mm thick

Straight edge with a black impact-resilient profile, table top 26 mm thick

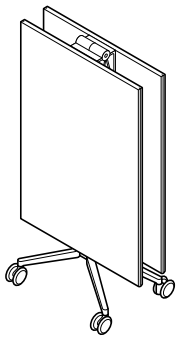

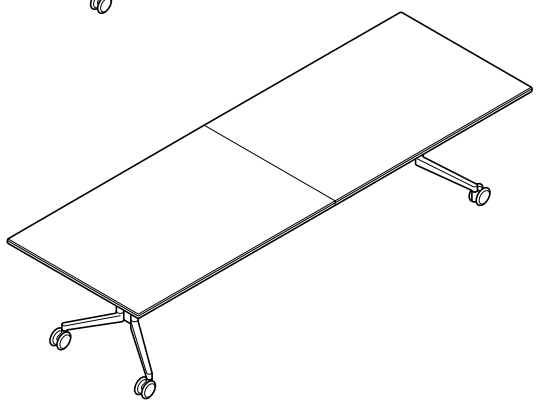

Straight edge with a white impact-resilient profile, table top 26 mm thick

Environment and product

Better use of space, selective sorting, service-friendliness
The Confair range is an impressive example of how intelligent design, smart functionality and quality can achieve financial, ecological and socio-cultural improvements. Encouraging people to become involved in shaping their own environments puts the focus on them personally and their potentials. The range is easy to handle and allows people to organise their own spaces, saving facility management costs as well as building and maintaining extra rooms. Wilkhahn's eco-based design principles combine a long product life with a careful choice of materials, as well as a repair- and service-friendly design. The Confair folding table is a perfect example:

- All components like the foot section, uprights and underframes are made of die-cast aluminium and extruded aluminium profiles and with the steel mechanical spring they combine an adherence to tolerances with extreme durability and full recycling capabilities. All the four lockable castors of unbreakable and through-dyed polyamide are designed to be hard-wearing.

- The table tops are made of lamin board with solid-wood edges. Natural materials like linoleum, laminates and genuine wood veneers are used for the surfaces. Veneered table tops are protected with water-based varnish low in solvent content. The integrated polypropylene impact-resilient profile protects the edges and prevents damage.

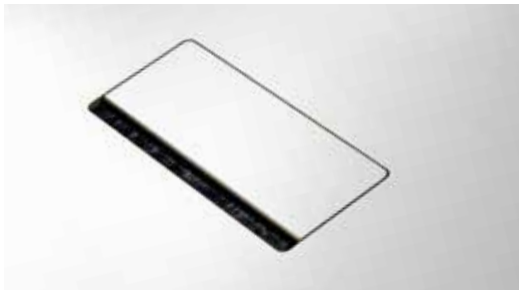

- All frame components and table tops are screwed together so that if wear and tear occurs – for example on the table tops – the panels can be unscrewed, reconditioned or replaced. The Confair range has opened up new opportunities for designing, furnishing and using conference spaces so that material and energy are saved. Apart from the durability and quality of the product, these aspects also help to improve a building's eco footprint overall.
