

design made in germany Wilkhahn

ON.® 170 range

A new dimension in flexibility. A natural stimulus for body and mind. A case of excellent design at its best.

A five-year development phase, combined with Wilkhahn's four decades of expertise in dynamic seating, has produced ON. ON gives our bodies the freedom to sit the way they want and can. At ON's core lies Trimension®, three-dimensional synchro-supporting kinematics with swivel points that precisely follow the positions of and scope of movement in the knee and hip joints. It stimulates a variety of natural postures and movement that allows the body to maintain perfect balance. The movement concept is simplicity itself and integrated into the design. ON offers clarity, space and a relaxed appeal. ON immediately conveys trust, value and comfort. The chair's visual form follows intuitive function. By pressing two buttons to rapidly adjust the counter pressure, ON is immediately ready to go. Armrests, backrest height and optional seat depth adjustment can also be altered while seated without additional levers. The wide product range ensures coherent furnishing solutions.

ON.®
Design: wiege

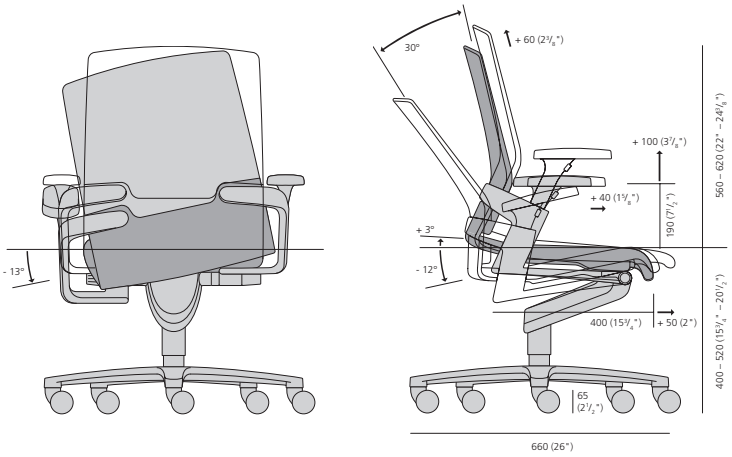

Model 175/7
Bright chromium-plated frame,
with Fiberflex cover

ON® The product family at a glance.

Backrest heights (each adjustable by 60 mm): medium-height backrest, or high backrest, or high backrest with headrest.
Armrest pads (all three-dimensionally adjustable): standard or soft foam pad, or leather upholstered pad.
Types of upholstery: seat and backrest covered in Fiberflex, or seat fabric cover with additional fabric cover on the backrest, or management grade upholstery with side facings and covers in fabric or leather.
Swivel chair frame types: the star base is available in black through-dyed plastic, or die-cast aluminium optionally coated, or with a natural polished finish or bright chromium plated. Bases with coated die-cast aluminium, natural polished finish or bright chromium plated combine with swing plates to match.
Visitor chair frame types: Fiberflex and fabric upholstered types are all stackable and bright chromium plated, not stackable with management grade upholstery, but with optional coated finish.

Due to innovative, synchro-supporting 3D kinematics, the sideways inclination of the seat and backrest is integrated into a perfect and synchronous movement concept.

All dimensions in mm (inches).
